CONSERVATOR OF FORESTS

J. HAYDEN

Subject: - construction of power lines through Giddim
north plant. - construction of lines.

Ref. :- Your note R/7/37 of 25-10-44. 22

Since the power line ~~area~~ is very close to the
Eastern boundaries of the plantation - it cannot be advantageously used
as ~~alternative~~ the second alternative is preferable. I suggest therefore
to plant the planks within the belt running underneath the wires with acacia
negundo. The Eucalyptus trees growing within this belt will be coppiced
as soon as growth will interfere with the line.

(58)

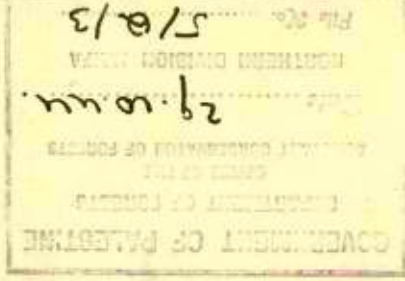

Subject: - Construction of power lines
through Gadiwa north plant.
construction of firebreaks.

Note

On 13.10.44 C.F. discussed this matter with M.O.N.D. and suggested that a firebreak might be made along the line beneath the wire. M.O.N.D. promised to see whether this would be a suitable place for a firebreak. If not, he would arrange to coppice the Eucalyptus on short rotation and gradually to replace them by Gyanophylla or High Ziziphus.

REC'D
M.O.M.

(22)

10th. May, 1945.

Conservator of Forests.

Subject :- Qadima East Forest Reserve.
Reference:- Your F/8/Q/5 of 25-4-45.

The following is a detailed account of the work so far carried out at Qadima East Forest Reserve during the last three planting seasons.

2. Compartment 1 (area 103 dunams.)

The area of this compartment was divided into 10 sub-compartments and planting operations were started in 1942-43 season. All along the boundary a row of *Acacia Farnesiana* followed by two rows each of *Tamarix* cuttings and *Acacia cyanophylla* plants, were planted at distances of 1 metre in the rows and $1\frac{1}{2}$ metre between the rows. On the boundaries of the sub-compartment two rows each of *cyanophylla* and *Tamarix* followed by two rows of *Elaeagnus* were put, in an order that the *Tamarix* cuttings faced the direction of the prevailing wind, while the inside areas were planted with *Eucalyptus* in the depressions where certain amount of humus was present and *artemisia* grasses on the dunes. In sub-compartment 8 a small area was sown with *Retama roetam* seeds, which failed to germinate. With the exception of 20% survival of *artemisia* grasses, all the above planting practically failed.

3. Reformation was again attempted in 1943-44. The division into sub-compartments was ignored and the whole area was planted with *Eucalyptus* in the depressions and *artemisia* grasses on the dunes, while *cyanophylla*, *farnesiana* and a small number of *prosopis* were planted along the boundaries. Of the *Tamarix* 5% survivals were recorded and of the *artemisia* a total of 30% was well established.

4. This season the whole area was planted in blocks of *Eucalyptus*, *cyanophylla* and *Tamarix* cuttings in accordance with the nature of the soil. A small number of *prosopis juliflora* plants were also used. Sowing of 10kgs. *Pinea* and 90 kgs. *Quercus aegilops* was carried out in small patches where certain amount of soil was present. No grasses were used, as previous planting of *artemisia* has practically fixed the dunes. At present, with the exception of *Acacia cyanophylla* plants which look rather poor, all this season planting is well established. The seeds have germinated well and in view of the heavy rains they stand a good chance of survival.

5. In all the above planting, 51,800 plants comprising: 53% *Acacia cyanophylla*, 25% *Acacia farnesiana*, 15% *Eucalyptus*, 5% *Elaeagnus* and 2% *prosopis* were used in addition to 34,200 *Tamarix* cuttings and 93,000 *Artemisia* grasses. The expenditure for planting, sowing, hoeing and preparation of cuttings have totaled the sum of L.P. 312.210.

6. Compartment 2. (area 94,594 dunams.)

During 1942-43 season the areas along the boundaries of the compartment and the sub-compartments were planted with two rows each of *cyanophylla*, *Farnesiana* and *Tamarix* using the same method as described for compartment 1. No planting or sowing took place however, in the outside areas. With the exception of isolated plants all planting have failed.

7. In 1943-44 season, the whole area was planted with *Artemisia* grasses at distances of 1 metre x 1 metre. Little success was achieved

1011. 1011. 1011.

as planting took place too late in the season.

8. 18,000 plants comprising 75% Cyanophylla and 25% farnesiana were used in addition to 2,700 tamarix cuttings and 95,000 Artemisia grasses. A total sum of LP. 203.140 was expended.

9. No work was carried out this season.

10. Compartment 7 (area 54,370 dunams.)

Formation on the lines described for compartment 2 was attempted during 1942-43 planting season only. 11,000 plants of Acacia cyanophylla and Acacia farnesiana and 6,000 cuttings of Tamarix were used and the amount expended was LP. 12.600. Only isolated trees of cyanophylla and Tamarix can be found on the area.

11. The following is a summary of the areas planted, the number of plants used and the expenditure incurred.

Compt. No.	Area in dunams.	No. of plants.	No. of cuttings.	Grasses	Seeds in Kgs.	Amount LP. sh.
1	103.000	51,860	34,200	93,000	110	312.210
2	94.594	18,000	2,700	95,000	-	203.140
7	54.370	11,000	6,000	-	-	12.600
TOTAL:	251.964	80,860	42,900	188,000	110	527.950

18th. January 1945.

Conservator of Forests.

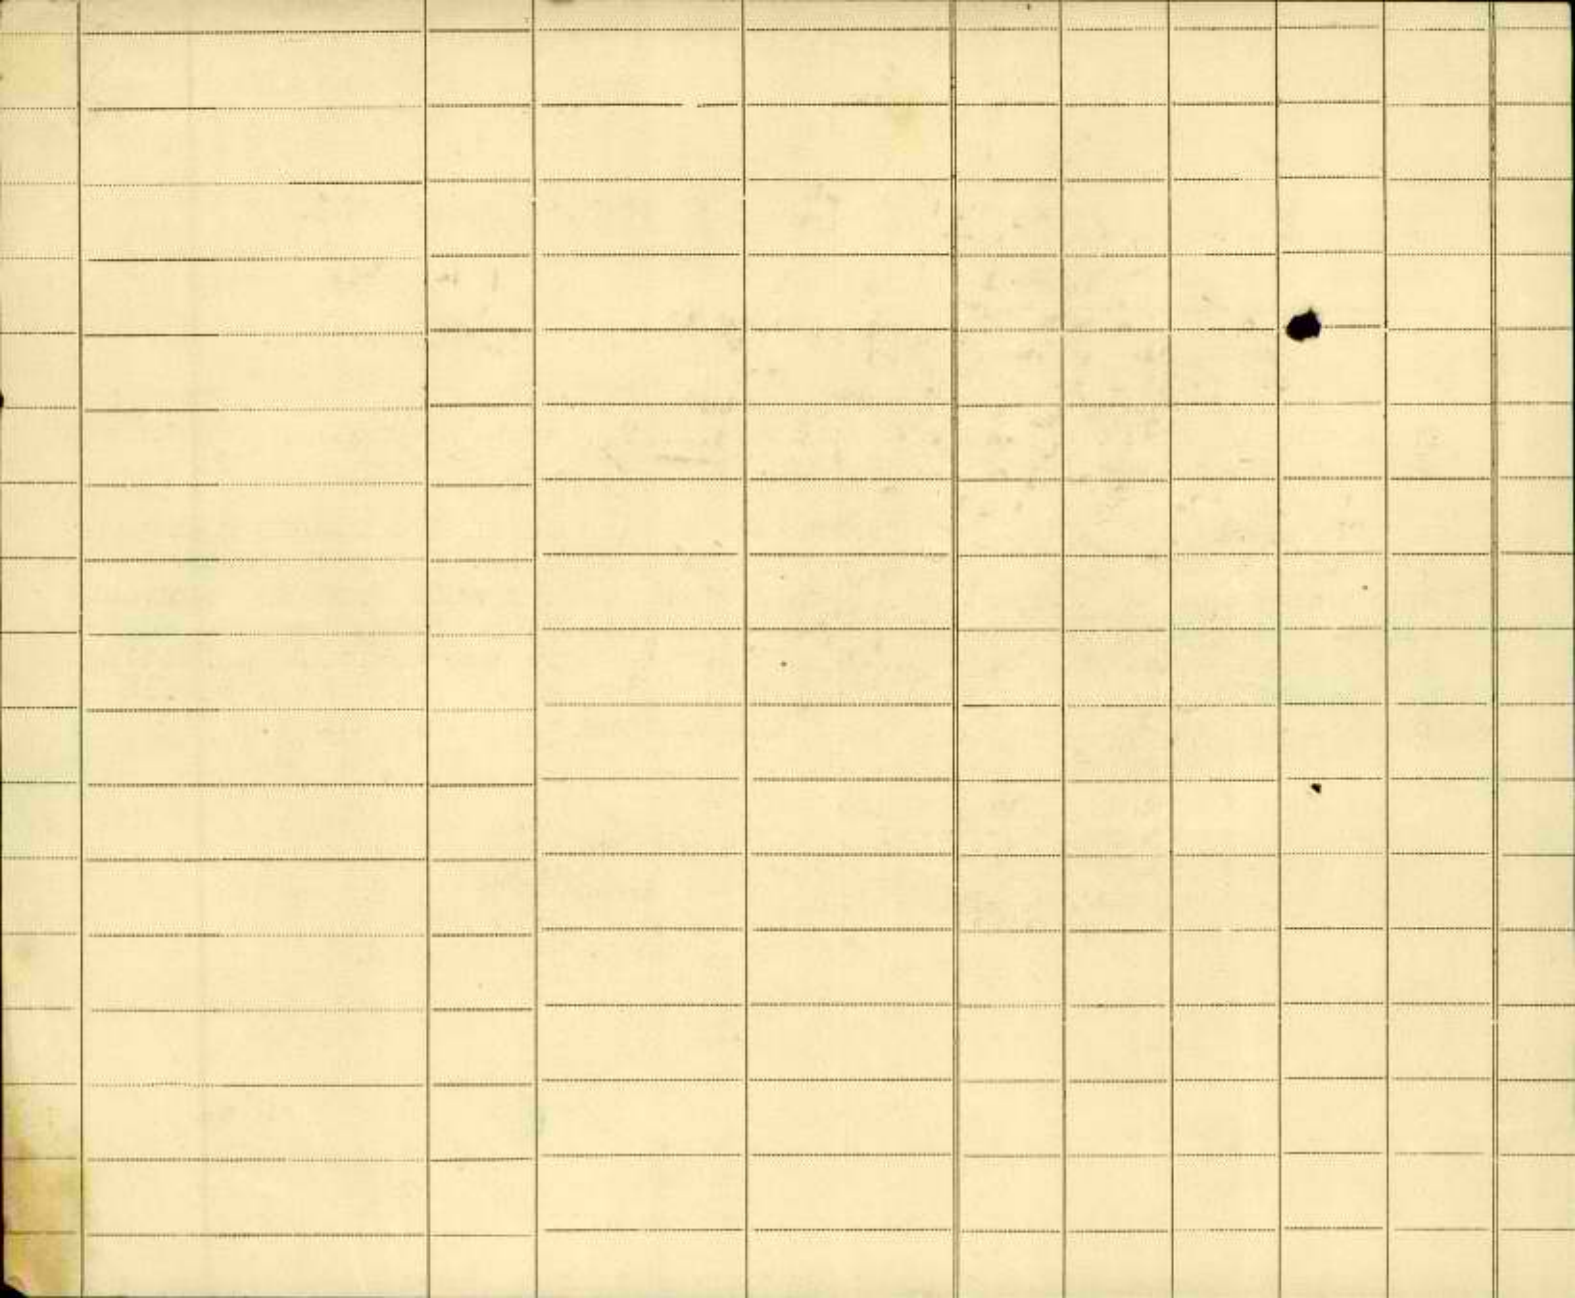

Subject :- Qadima North Plantation.

As instructed by you verbally on the 5th.1.45 I beg to relate the following observations made by the A.C.F.N.D. when inspecting together with me the Qadima North plantation.

No more Eucalyptus plants are to be planted in the blanks since they failed during the last three planting seasons. The failure is apparently due to the nature of soil which varies much from the surroundings. Other species such as Acacia cyanophylla, Tamarix, Quercus aegilops, Ficus sycamorus or even Carobs may be more successful. Recruiting in the small pockets is almost not necessary as the plants are liable to fail due to the competition of the already existing trees.

B. Ranting.
MANAGEMENT OFFICER
NORTHERN DIVISION.

BR/LA

F/7/37

Note.

On 25.11.44 I walked through Kadima North plantation. The ploughed land between the main road and the forest was remarkably soft (possibly only soon after rain) but a road of access should be planned and constructed at an early date, and well before we need to take out the first thinnings.

2. The plantation is most uneven, and careful examination might reveal some interesting facts about the variations in soil conditions. The filling of the smaller blanks should be done without delay with low species, e.g. Cyanophylla, Tamarix, High Ziziphus, or D. juliflora. Some of the bigger blanks might perhaps be planted with Eucalyptus, at least experimentally. It seems possible that some of the failures are due to strong wind or to wind-driven sand.

Subject:- Construction of Power Lines through Nadim Natan
Plantation.

Ref.:- Your E/7/37 of 29.6.44.

I am in difficulty to explain the unwarranted action of the P.E.G. since their representative in Nathaniyah has been given to understand by Forest Ranger, Hadera that your prior authorization for the erection of the line across the plantation is required. The contents of para 2 and 3 of your letter have been noted and will be brought to the notice of all the Forest Rangers for future compliance. With reference to para 4 of the same letter I beg to state that the plantation has been visited by me on the 19.7.44 and details of damage caused are given as follows:

6 trees of 2 years old.	Estimated replacement value of each	25.0.15
40 " " " " " "	" " " " " "	15.0.6
	Total damage	12.0.75

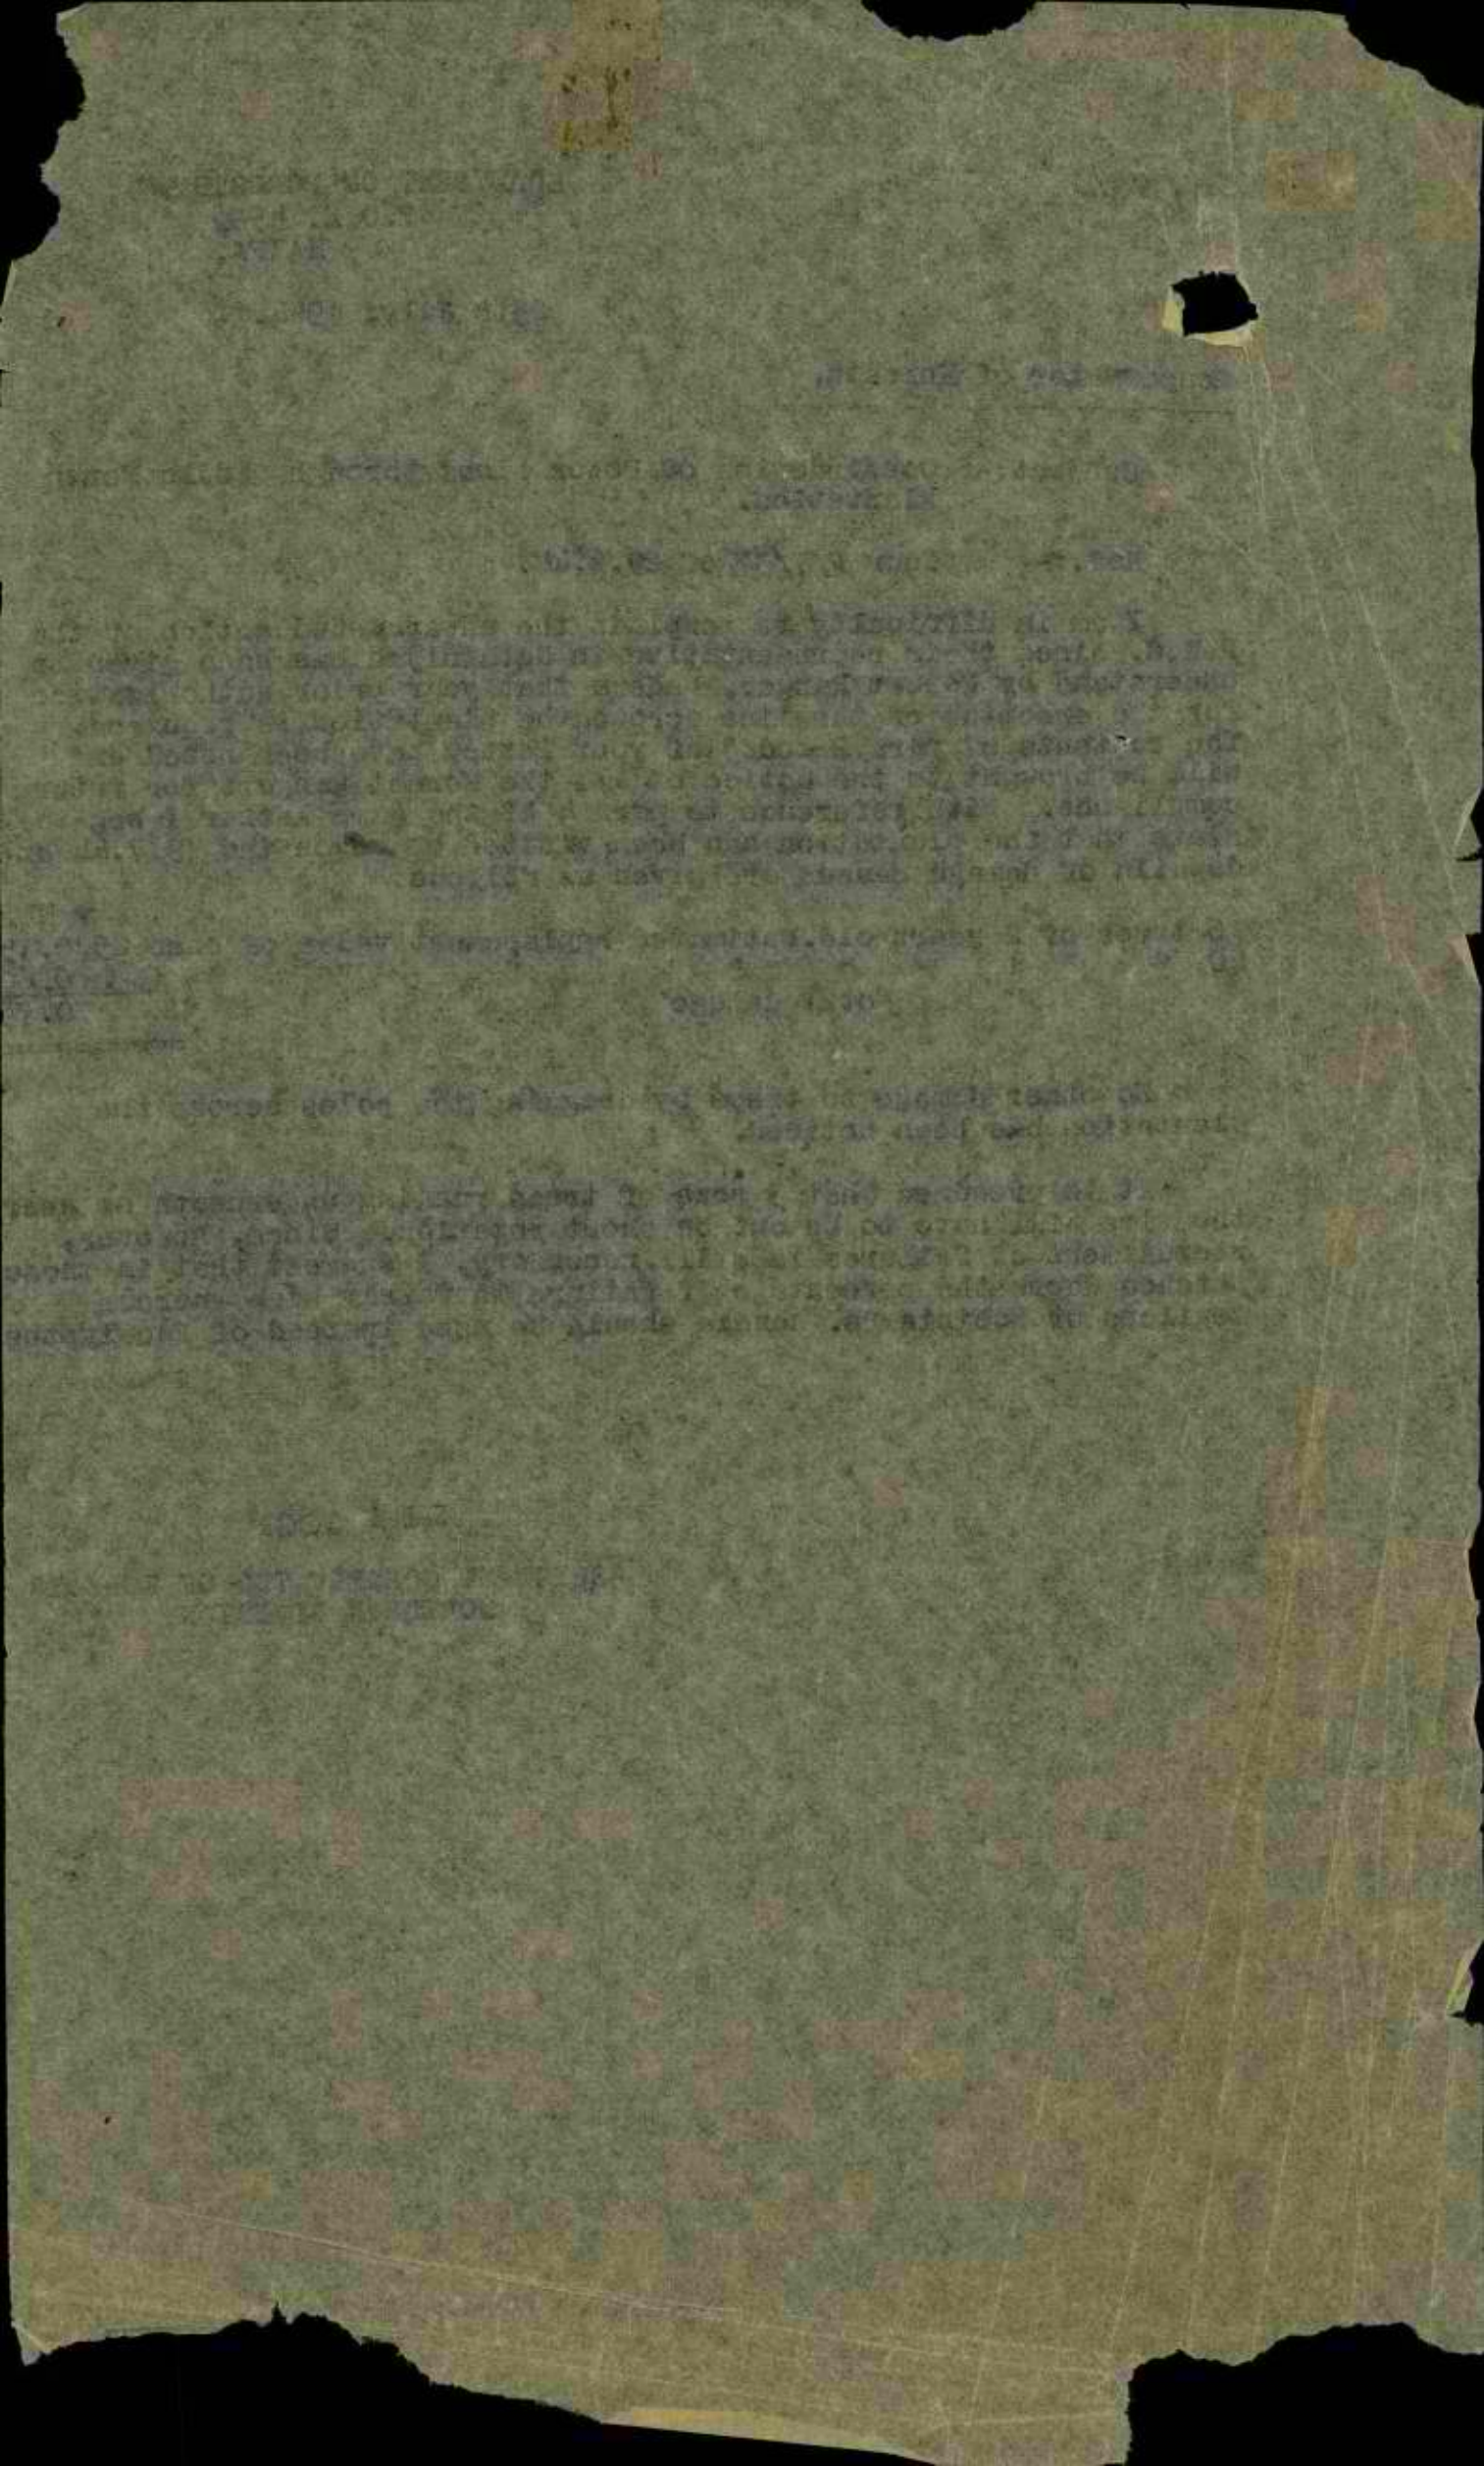

No other damage to trees by dragging the poles across the plantation has been noticed.

It is presumed that 3 rows of trees running underneath or near the wire will have to be cut on short rotation. Since, however, recruitment of failures is still necessary, I suggest that in those patches where the percentage of failure is fairly high - *Pinus*, *Robinia* Ps. *Achras* should be used instead of *Eucalyptus*.

POWER HOUSE
TEL AVIV PALESTINE

44/3044/JSS

21st June, 1944

Conservator of Forests.

Dear Sir,

We acknowledge receipt of your letter 7/37 of 30.5.44.

We very much regret that acting under the misapprehension that your consent had been obtained, and being pressed by Zur Moshe Settlement to provide the electricity supply for growing crops urgently requiring irrigation, our Mains Department has in the meantime erected the line in accordance with Plan TA2658.

As regards the suggestion in para 4 of your letter, it would have been unfeasible to run the line in this way, for this would have meant incorporating two substantial steel towers - almost an impossibility under present conditions of shortage of materials, and certainly contrary to the general instructions regarding use of materials which are in short supply.

We exceedingly regret the irregularity of erecting this line without your authorisation. We hope, however, that under the circumstances you will not require us to alter the route and will see your way to letting us have your covering approval. The Plan 2658 is returned herewith.

We have noted, and do fully appreciate, your observations regarding the interests of forests and forest owners in this country. We will in future do our best to cooperate with you in this respect by making every effort to avoid passing lines through growing forests.

Yours faithfully,

THE PALESTINE ELECTRIC CORPORATION LTD.

Dear Sirs,

Being faced with a fait accompli, I have no alternative, and I therefore withdraw my request that you will pass your wire along the edge of the Forest Reserve. I will give instruction that the trees be cleared out as soon as they seem likely to endanger your wire.

2. At the same time I welcome your last paragraph, and shall not fail to note your cooperation in future whenever you construct a line along the edge of an existing forest instead of across the forest.

Yours faithfully,

Copy to D.O.N.D.

GNS/YV

OF AGRICULTURE AND FORESTS,

the Forests Ordinance, 1926, Section 9)

30th May, 1944.

7/37

Dear Sirs,

I refer to your letter 44/2206/MJ of 3.5.44 to the Assistant Conservator of Forests, Northern Division Haifa, asking for leave to erect poles and to pass a power line across Qalansuwa Forest Reserve. The Reserve is planted with Eucalyptus trees, which, if successful, will grow tall enough to interfere with a wire passing overhead. The crop on the land is therefore different from any other crop which is likely to be grown in Palestine, since the line would pass safely above all normal olive, orange and other fruit trees.

2. In the case of telephone and telegraph wires, I have explained matters fully to the Engineer-in-Chief, who has agreed that when constructing new lines, he will make every effort to deviate so as to avoid forests and plantations of high trees. On my part, I agreed that when planting under one of his wires, I would ensure that only low species of trees were used.

3. In the case of power lines, it would be in the best interests of forestry in Palestine if a similar arrangement could be made. In afforestation operations on State Domain or private property, no trees of high species should be planted beneath existing wires, but the Electric Companies should make every effort to avoid passing their lines through growing forests.

4. I return your map herewith, to enquire whether you would have any objection to running the supply lines to the wells of Zur Moshe Settlement in a straight line from the point 'X' to the point 'Y' or even 'Z'. I am, of course, aware of the need for economising in wires and poles, but nevertheless feel that too little consideration is given in Palestine in such matters to the interests of forests and forest owners.

Yours faithfully,

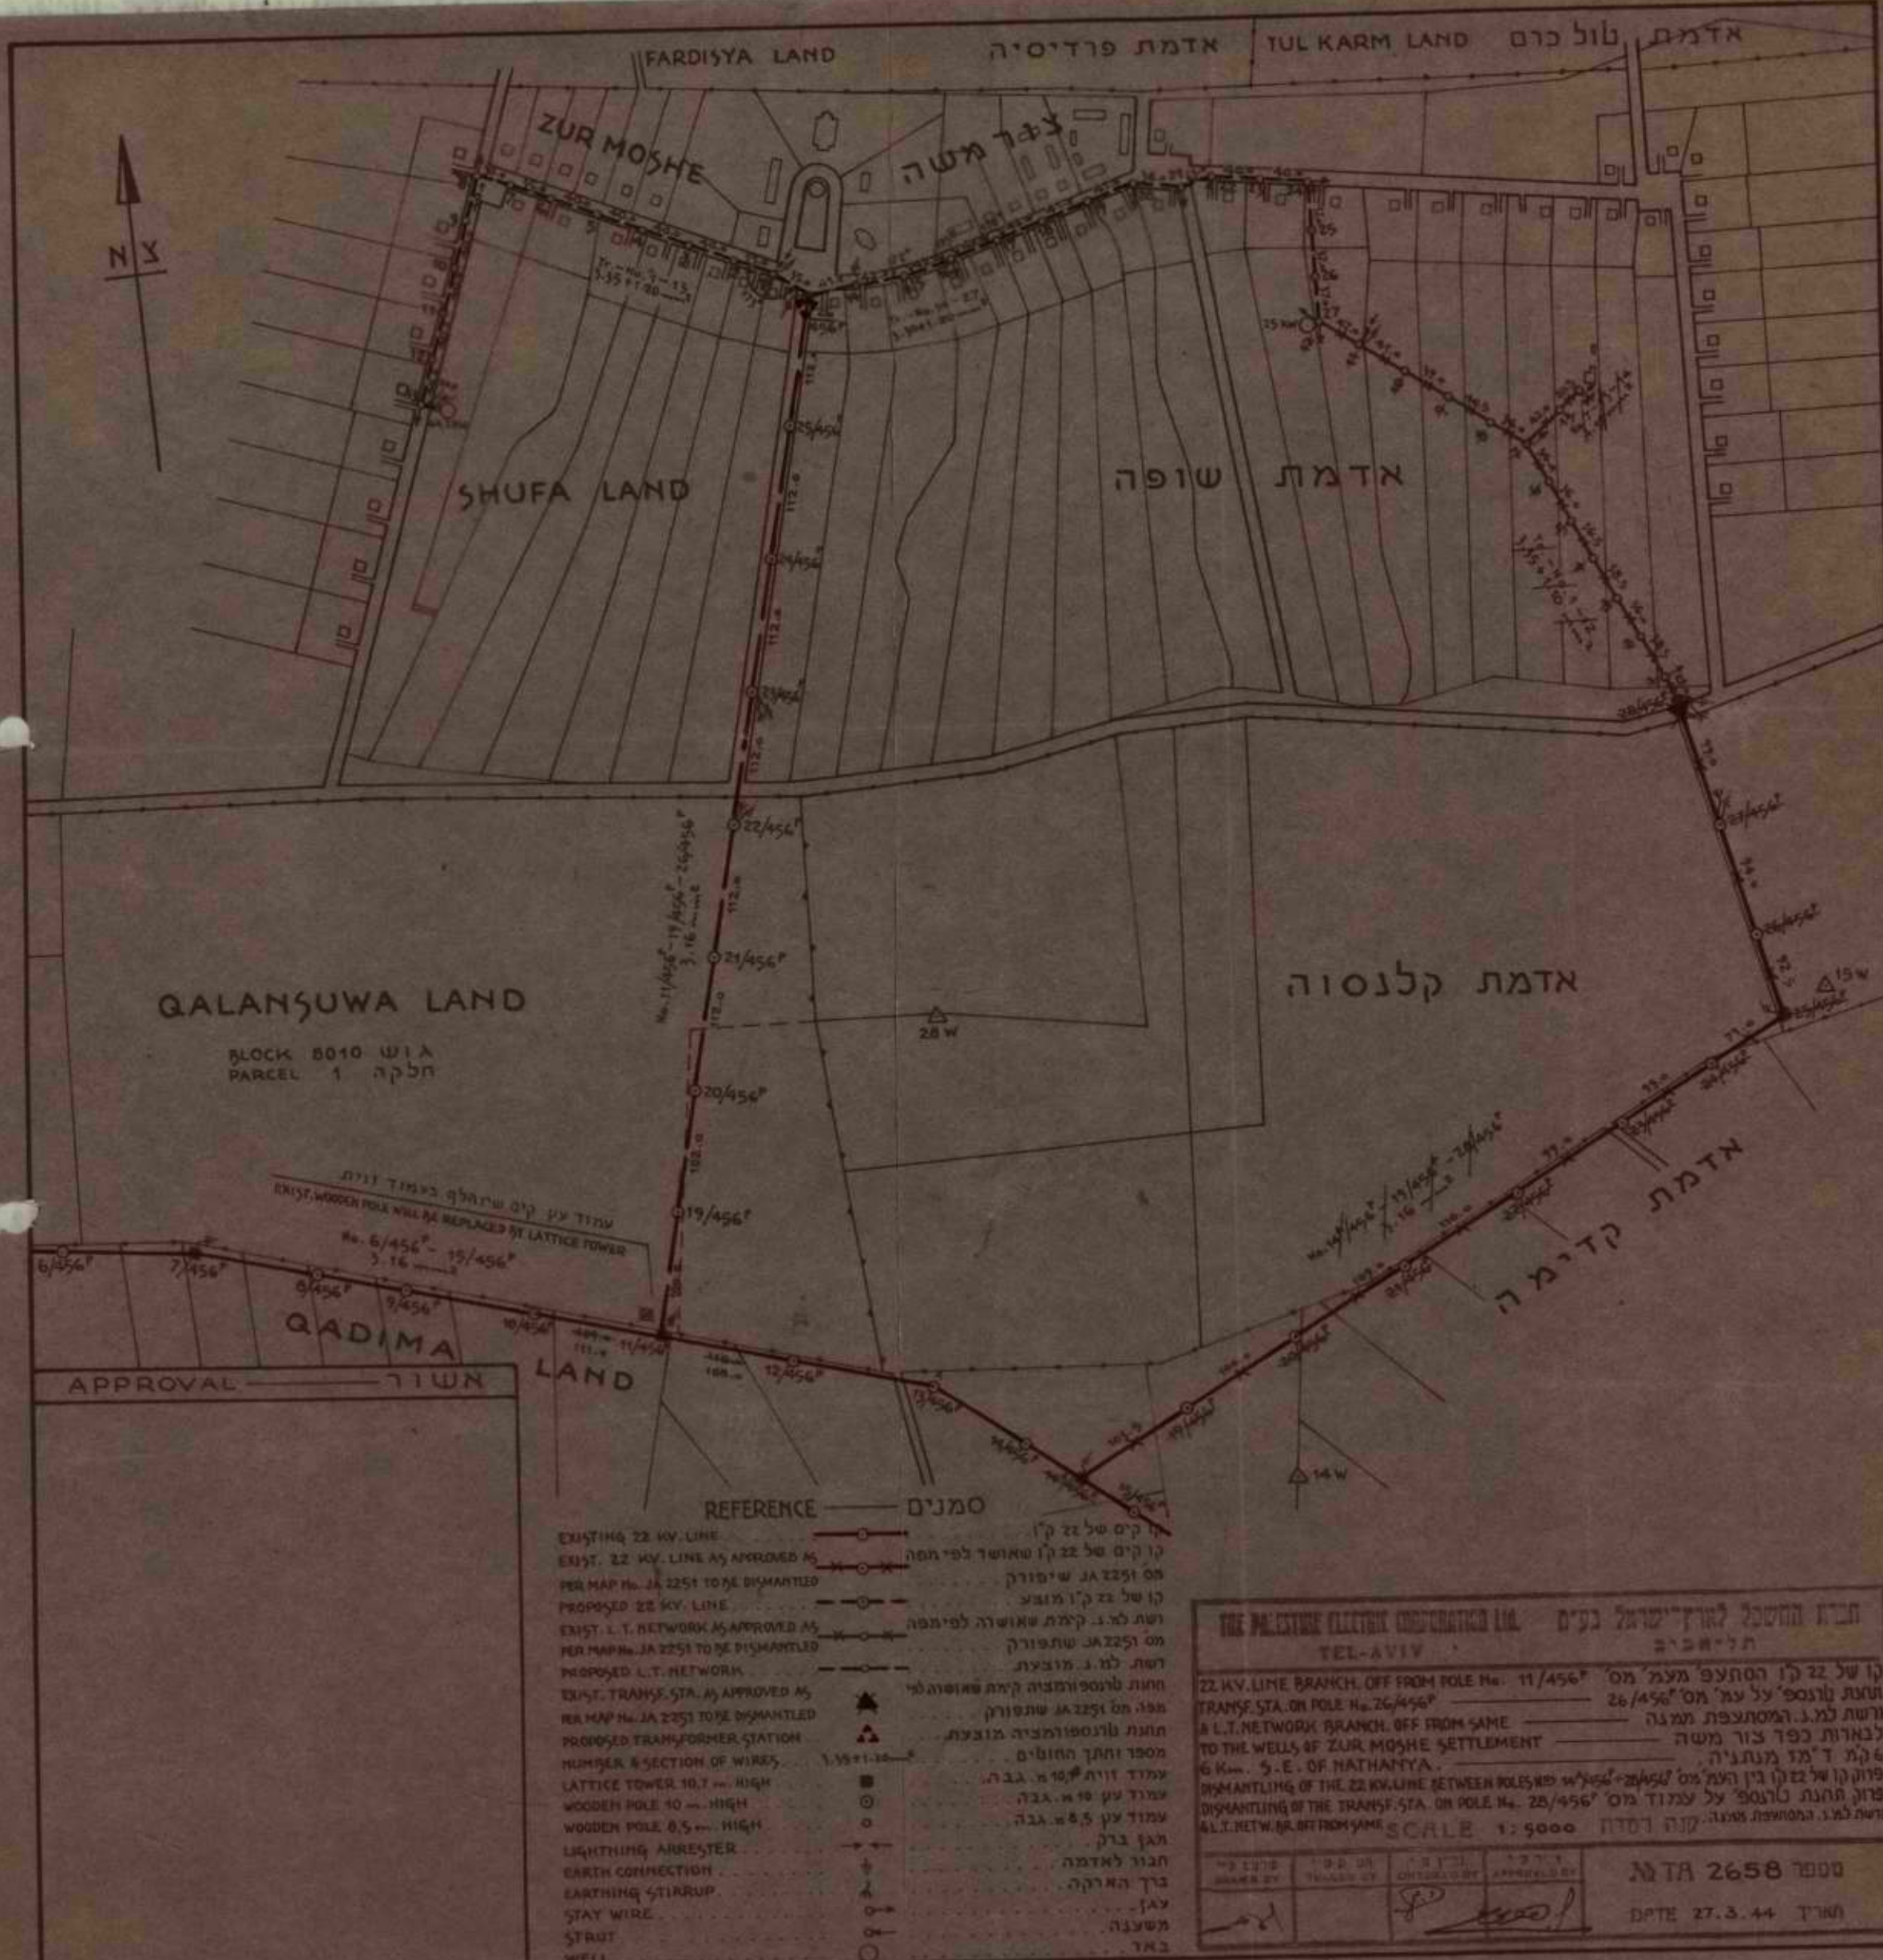

(Sgd) G. N. SALE
Conservator of Forests.

Conservator of Forests.

Subject:- Wayleave - Plan TA 2658. / 14

I beg to enclose herewith a letter received from the P.E.C. with the following observations from M.O.N.D.:

Since there is no alternative and the P.E.C. is to be granted a permission to erect the 4 poles within the area I beg to suggest the following:

All the Eucalyptus trees growing underneath the wire of the proposed line are to be replaced by a low growing specie such as Q. Aegilops, Acacia Cyanophylla, etc. The assessed value of the trees which are to be removed and the cost of their replacement is to be borne by the P.E.C. This proposal will eliminate repeated pruning of trees which have not yet reached full development and will, no doubt, prove in the long less costly to the company, as the trees to be replaced are only 3 years old.

DIVISION OFFICER.

Assistant Conservator of Forests,
Northern Division,
Haifa.

Dear Sir,

Wayleave - Plan TA 2658.

=== We enclose herewith in duplicate Plan No. TA 2658 dated 27.3.44 showing proposed extension of our system for electricity supply to wells of Zur Moshe Settlement, 6 Km. S.E. of Nathanya.

In accordance with this plan the 22 kV line is to pass over the forest of young eucalyptus trees at Parcel 1 of Block 8010 Qalansuwa land, necessitating the setting of 4 poles, Nos. 19-20-21-22/456P within this land. The proposed locations of the poles has been pointed out at site to your Mr. Littman.

We should be obliged if you would kindly favour us with your consent to the erection of the line across the said land and grant us the required wayleave in connection with the setting of the poles and the erection and maintenance of this line.

In course of time, should the trees grow in such a way as to be likely to interfere with the line, it might become necessary, in the interests of safety, to cut the upper branches and repeat the operation every few years. In this connection we would, when the necessity arises, contact you or any representatives you may indicate and if so required would undertake to carry out the work ourselves under the supervision of your officers.

We should be grateful if you will kindly intimate your concurrence by signing and returning to us one copy of the attached plan.

Yours faithfully,

Note.

I discussed this with M.O.N.D. on 8.9.43.
No formation work appears on his list for 1943/4, but
three compartments in Qadima East are due to be
'tended', that is a re-formation of a plantation which
practically failed in 1943/43.
